

Summary of Feedback

1st March 2022

- The website should be designed for both computer and mobile devices.
- Search box is better to include for both keywords and different filtering options.
- It is a good idea to use the 'recently updated' option for the project. It could show how much the project is completed and how much it is remained.
- All 17 goals need to be shown.
- There should not be any options or features that shows competition between the numbers of projects that are done in any city of Saskatchewan.
- Up coming events, it is not mandatory.
- Searching "Awards" is an interesting idea.
- Different elements from all ideas should be combined.
- Having a quick and great visual part is very important. (Each user should see all the projects in Saskatchewan)
- 'Contact us' in our design was very interesting.
- Searching and listing project is the most important feature.
- The other pages should not be repeated on the profile page. It is better to have a links for them.
- 'Calendar' is not an important feature so it can be ignored.
- Showing "Critical Concerns" is a very good idea.
- 'Clean' and 'organized' design is interesting.
- Having an option to like the projects is a good idea. (Such as star button)

- Some information that is not required to show for the public could be used only by backend users and admins.
- The main concern is to show as many projects as possible. (What if there are 500 projects?)
- 'Wow' factor in the website is an important so that users can become more curious about RCE Sask.
- If you want to include map data then it needs more research from your side.
